```
/tissue type="mycelia"
/clone lib="FvM"
/clone lib ananorph Fusarium verticillioides Library
/clone lib ananorph Fusarium verticillioides Library
/clone was prepared from pooled RNA obtained from a 48-hour
/clone was prepared from pooled RNA obtained from M-3125
/clitures were vacuum filtered and the mycelial mats were
/clone lid liquid nitrogen, ground to a powder, and then
/clone added to TRIzol Reagent (Invitrogen, Carlabad CA) at
/clone approximately 1 g mycelia per 10 ml TRIzol. The cDNA was
/clone lid ligated into the pBluesScript II SK(+) XR

/tissue types=mycelia"
/clone lib="FvM"
/clone lib="YevM"
/clone lib="YevM was prepared from pooled RNA obtained from a 48-hour and a 72 hour, liquid GYAM culture from strain M-3125.
Cultures were vacuum filtered and the mycelial mats were frozen in liquid nitrogen, ground to a powder, and then added to TRIzol Reagent (Invitrogen, Carlsbad CA) at approximately 1 g mycelia per 10 ml TRIzol. The cDNA was directionally ligated into the pBlueScript II SK(+) XR vector (CDNA Synthesis Kit; Stratagene)."

FvM was prepared from pooled RNA obtained from a 48-hour
and a 72 hour, liquid GYAM culture from strain M-3125.
Cultures were vacuum filtered and the mycelial mats were
frozen in liquid nitrogen, ground to a powder, and then
added to TRIZol Reagent (Invitrogen, Carlsbad CA) at
approximately I g mycelia per 10 ml TRIZol. The CDNA was
directionally ligated into the pBlueScript II SK(+) XR
vector (cDNA Synthesis Kit; Stratagene)."

FVM was prepared from pooled RNA obtained from a 48-hour
and 72 hour, liquid GYAM culture from strain M-3125.
Cultures were vacuum filtered and the mycelial mats were
frozen in liquid nitrogen, ground to a powder, and then
added to TRIZOl Reagent (Invitrogen, Carlsbad CA) at
approximately I g mycelia per 10 ml TRIZOl. The CDNA was
directionally ligated into the pBlueScript II SK(+) XR
                                                                                                                                                                                                                                                                                                                                                                                                Bukaryotta; Fungi; Ascomycota; Pezizomycotina; Sordariomycetes; Hypocreomycetidae; Hypocreales; Nectriaceae; Gibberella.

Novel Helicobacter felis urease X and Y subunit polypeptides, useful in the diagnosis of Helicobacter felis infections and in the preparation of vaccines.

Claim 8; SEQ ID NO 2; 76pp; English.

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis in Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an urease X subunit polypeptide of the invention.

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis infections the lacibobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an Disclosure; SEQ ID NO 14; 76pp; English. ureaseXY subunit of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis is Helicobacter felis for difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CMHFLKKDEVMPGVGNMVPDLGVEATFPDGTKLVTVNWPIBPDEHFKAGEVKFGCDKDIE 120

The invention relates to an isolated nucleic acid molecule conferring on Helicobacter bizzozeronii an ability to produce urease, where the nucleic acid molecule is a urease gene cluster comprising at least one urease structural gene and at least one urease accessory gene. The nucleic acid molecule is chosen from ureA, ureB, ureE, ureF, ureG, ureH and ureI. The invention also relates to an isolated protein encoded by the nucleic acid, a vaccine for preventing onset of disease in mammals infected by H. bizzozeronii comprising a nucleic acid and a carrier, and an isolated antibody or its binding portion raised against the nucleic acid. The nucleic acids, proteins and antibodies are useful for vaccinating mammals against onset of disease caused by infection of H. bizzozeronii, which involves providing a nucleic acid as an antigen, providing an antibody, involves providing a nucleoticacid as an antigen, providing an uncleoticacid as an antigen, providing an uncleotide sequence as a probe in a nucleic acid hybridisation assay, contacting the sample with the antigen or the probe, and detecting any reaction which indicates that H. bizzozeronii is present in the sample. This sequence represents the H. bizzozeronii ureA ų, Novel isolated nucleic acid molecule having urease gene cluster, and conferring on Helicobacter bizzozeronii ability to produce urease, useful as vaccine for preventing disease in mammals infected by H.bizzozeronii. 61 CMHFLKKDEVMPGVGNMVPDLGVEATFPDGTKLVTVNWPIEPDBHFKA-GEV--KFGCDK 117 DIELNAGKEVTELEVTNEGPKSLHVGSHFHFFEANKALKFDREKAYGKRLDIPSGNTLRI 177 61 GRTLLKADDVMPGVAHMIHEVGIEANPPDGTKLVTIHTPVEDGGHKLAPGEVILK---NE 1 VKLTPKEQEKFLLYYAGEVARKRKAEGLKLNQPEAIAYISAHIMDEARRGKKTVAQLMEE Gaps 9 56.3%; Score 665; DB 8; Length 234; 57.3%; Pred. The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes theorems and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify controllers used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can entisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Urease A (AAW07193) and B (AAW07194) subunits of Helicobacter pylori are encoded by the ureA + ureB gene locus of clinical isolate CPM630. Vectors, e.g. pORV214 (see also AAT44351), carrying the gene locus can be used to transform host cells for the large-scale prodn. of recombinant, enzymatically inactive, multimeric urease. The urease complex induces a mucosal immune response that can treat or prevent Helicobacter, esp. H. pylori, gastroduodenal infection. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vaccine for inducing mucosal response to Helicobacter - contg. multimeric urease complex and pref. an antibiotic, anti-secretory agent or bismuth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 GRTLLKPDDVMDGVASMIHEVGIEAMFPDGTKLVTVHTPIEANGKLVPGEL-FLKNEDIT 119

                                                                                                                                       ò
                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia chemselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antisense nucleic acids sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in clerwipo.int/pub/published_pct_sequences

recative epitopes in a target protein; (2) eliminating cross-
reactive epitopes in a target protein; (2) eliminating cross-
reactive epitopes, and (3) verifying remaining epitopes by determining
their activity in vitro and/or in vivo. The products of the invention
have antibacterial, antiulcer, antiulchammatory, cytostatic, virucide,
protozoacide and immunosuppressive activity. The vaccine is especially
used to protect against infection by Helicobacter pylori, but more
generally can be prepared from proteins from any pathogen (virus,
bacterium, protozoan) or tumour, or associated with autoimmune disease.
Synthetic epitopes that are more immunogenic than natural sequences can
be identified, and the vaccine may have increased immunogenicity (when
dormulated with adjuvant) or immunotolerance (formulated without an
adjuvant). This sequence represents the urease A protein PA4 described in
                                                                                                        61 GRILLKADDVMDGVASMIHEVGIEAMFPDGTKLVTVHTFIEANGKLVPGEL-FLKNEDIT 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to inducing an immune response against Helicobacter in a mammal, comprising mucosally administering to the mammal an attenuated Salmonella vector containing a nucleic acid molecule encoding a Helicobacter antigen, and parenterally administering to the mammal a Helicobacter antigen. Also included is an attenuated Salmonella vector comprising a nucleic acid molecule encoding a Helicobacter antigen. The Helicobacter antigen is a urease subunit, or its immunogenic fragment (encoded by the urea and urea genes). The mammal is at risk of having but does not have Helicobacter infection or has a Helicobacter infection. The attenuated Salmonella vector further comprises an htra or nirB promoter. The vector can be used in inducing an immune response against Helicobacter in a mammal. The vector can be used to treat Helicobacter infection. The vector and the method can be used to treat

Helicobacter induced gastroduodenal diseases, including acute, chronic or atrophic gastritis, peptic ulcer diseases (e.g. gastric or duodenal ulcers), and gastric carcinoma. Attenuated Salmonalla vector pHUR3 was constructed expressing UreA and uncluding an E. coli AmpR gene. The present sequence represents a protein or peptide encoded by the pHUR3 plasmid. NOTE: pHUR3 is represented by both ARBS5112 and ARBS5130, the peptides expressed by pHUR3 are shown in the sequence listing to be split between ARBS5112 and ABBS5130, yet Figure 4 shows all the peptides being expressed by the one sequence, therefore all encoded peptides are cross-

suppresses urease activity of H. pylori by an immune reaction. Also included are a gene which encodes the urease fragment, a vaccine against H. pylori comprising the urease fragment, a transformed cell transformed by introducing the gene, an antibody which recognises the urease fragment and transforming a plant by introducing the gene into the plant and making it express. The urease fragment is useful for producing blood serum containing antibodies which suppresses proliferation of H. pylori immunising a living organism (e.g. a human, cow or hen) with the urease immunising a living organism (e.g. a human, cow or hen) with the urease tragment. The fragment may be purified from cow's milk or hen eggs from transgenic animals expressing the fragment. H. pylori is thought to be a cause of gastric and peptic ulcers, gastritis and may be implicated in stomach cancer. The urease enzyme is thought to be responsible for maintaining the bacterium in the acid conditions of the stomach. The present sequence is the H. pylori urease alpha subunit.

New peptide useful as a vaccine against Helicobacter pylori induces an antibody response against the bacterial urease.

Disclosure; SEQ ID NO 2; 19pp; Japanese

This invention relates to a novel immunogenic peptide that induces production of antibodies against the Helicobacter pylori (H. pylori)

```
The sequence of the Helicobacter felis urease ureA gene product (given in AAR67371) was compared to ureases of Helicobacter pylori (AAR67375), proteus mirabilis (AAR67376) and jack bean urease (AAR67377) and regions of homology were identified. (Updated on 25-MAR-2003 to correct PN

                                                                                                                                                                                                                                                                                                  9
                                                               are useful for passive immunisation and diagnostic techniques.

Furthermore, the antibacterial peptide can be used to immunise an animal in order to produce antibodies that are present within a functional food such as milk or eggs. This polypeptide sequence is the H. pylori urease alpha subunit protein of the invention.
urease protein. Specifically, it refers to a peptide antigen capable of inducing an antibody response, such that it can be used to develop a vaccine against H. pylori. The present invention describes generating monoclonal antibodies against the urease using hybridoma techniques that

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8628,
